Hardy Pottinger - UCLA Library

A word about cathedrals

- Ansible and ServerSpec are fantastic tools, and once you get into using them a bit, you will have grand plans on how to use them more
- You will have those ideas today
- We will not build any cathedrals today
- We may show you hints at the ways some cathedrals have been built, however...

We will not build cathedrals
today

We are constantly learning more about our environment

- Library developers shop jobs a lot
- Have you seen the mailing list?
- We change jobs a lot
- We are always the newbie

ServerSpec

- Extension of RSpec
- Yep, it's a Ruby gem
- Is a great way to force yourself to think about your intentions before you provision a new service
- Is a great way to get to know your existing services

Installing ServerSpec

- It's a Ruby gem, you'll need Ruby 1.9.x+ installed
- `gem install serverspec`
- you'll also need SSH access to the servers you want to check
- For Ansible you'll probably need Sudo privileges on these servers

Start simple

```
require 'spec_helper'

describe package('httpd') do
  it { should be_installed }
end

describe service('httpd') do
  it { should be_enabled }
  it { should be_running }
end

describe port(80) do
  it { should be_listening }
end
```

1. Packages
2. Services
3. Ports

Yes, there is an init script

```
$ serverspec-init
```

```
Select OS type:
```

```
1) UN*X
```

```
2) Windows
```

```
Select number: 1
```

```
Select a backend type:
```

```
1) SSH
```

```
2) Exec (local)
```

```
Select number: 1
```

```
Vagrant instance y/n: n
```

```
Input target host name: www.example.jp
```

```
+ spec/
```

```
+ spec/www.example.jp/
```

```
+ spec/www.example.jp/sample_spec.rb
```

```
+ spec/spec_helper.rb
```

```
+ Rakefile
```

```
+ .rspec
```

Run the tests

```
$ rake spec
```

```
/usr/bin/ruby -S rspec spec/www.example.jp/sample_spec.rb
```

```
Package "httpd"
```

```
  should be installed
```

```
Service "httpd"
```

```
  should be enabled
```

```
  should be running
```

```
Port "80"
```

```
  should be listening
```

```
Finished in 0.21091 seconds (files took 6.37 seconds to load)
```

```
4 examples, 0 failures
```

What's next?

- Start simple, with the services you already know
- Consider writing tests **before** you deploy a new service
- As you use these tools, look for ways to consolidate your effort
